Contents

1 CONNECTEDNESS **5**

1.1 Connectedness, arcwise connectedness, continuumwise connectedness (continuum chainability) 5

1.2 A cut point (the complement is not connected); a separating point (the complement is not continuumwise connected) 5

1.3 Components, quasi-components, composants. Arc-components. 5

2 LOCAL CONNECTEDNESS **7**

2.1 Local connectedness and related concepts (connectedness im kleinen, aposyndesis, semi-local connectedness); relations between them. 7

3 DIMENSION **9**

3.1 The concept of a curve. Mapping of $[0, 1]$ onto $[0, 1]^2$. 9

3.2 Menger-Urysohn dimension of a space at a point. 9

3.3 Universal spaces (in general). 9

3.3.1 Hilbert's cube 9

3.3.2 Sierpiński Universal Plane Curve 9

3.3.3 Menger's universal curve. Its Anderson's characterization. 10

3.4 Universal Menger's compacta. Their Bestvina's characterization. 10

3.5 Nöbeling's examples. (?). 12

3.6 Embeddability of a curve in a surface. Planability. Two Kuratowski's graphs and two Claytor's curves. Embeddability of a locally connected continuum in the plane. 12

4 ORDER OF A POINT **13**

4.1 Menger-Urysohn's order of a point. 13

4.2 Curves of a finite order. 13

4.3 Urysohn's examples: for each positive integer $n \geq 2$ there is a continuum $X(n)$ consisting solely of points of order n and $2n - 2$. 13

4.3.1 Sierpiński Tringle 13

4.4 Urysohn's examples: for $\mathfrak{r} \in \{\omega, \aleph_0, \mathfrak{c}\}$ there is a continuum $X(\mathfrak{r})$ consisting solely of points of order $\mathfrak{r}$ 14
